

Tobacco Control Research Branch

The Tobacco Control Research Branch (TCRB) works toward a world free of tobacco use and related cancer and suffering. TCRB leads and collaborates on research and disseminates evidence-based findings to prevent, treat, and control tobacco use. TCRB funds research grants, cooperative agreements, and contracts; sponsors conferences and symposia; and communicates the findings of cutting-edge tobacco control science. In addition to conducting research, TCRB scientists participate in a variety of scientific and program activities to support national and international tobacco control efforts.

Tobacco control model of nicotine addiction. Giovino, G. A. (2002). Epidemiology of tobacco use in the United States. *Oncogene*, 21(48), 7326–7340. Adapted from: Orleans, C.T. and Slade, J. (1993). *Nicotine Addiction: Principles and Management*. New York: Oxford University Press, p. ix.

Research Funding

TCRB supports research through a variety of NIH funding mechanisms. Most grants are investigator initiated and are not submitted in response to a specific funding opportunity announcement (FOA). The epidemiologic model to the left highlights the breadth of the topics included in the branch's research portfolio.

TCRB currently funds the following major research initiatives:

Improving Effectiveness of Smoking Cessation Interventions and Programs in Low-Income Adult Populations – An initiative aimed at significantly reducing smoking prevalence among low-income U.S. adults by improving outcomes of smoking cessation interventions among this population.

NIH Tobacco Regulatory Science Program – A joint effort by the National Institutes of Health and the Food and Drug Administration, under an interagency partnership to foster tobacco regulatory science research and protect public health. NCI research is helping to develop an evidence base to inform the work of the FDA's Center for Tobacco Products to regulate the manufacture, marketing, and distribution of tobacco products.

State and Community Tobacco Control Research Initiative – An initiative that awards cooperative agreements to examine important understudied aspects of state and community tobacco control policy and media interventions. The initiative's four main research areas are secondhand smoke policies, tobacco tax and pricing policies, tobacco industry marketing/promotion and mass media countermeasures, and community and social norms. Cooperative agreements were awarded to seven research projects and one coordinating center in 2011.

International Tobacco and Health Research and Capacity Building Program – This program supports transdisciplinary research and capacity-building projects that address the burden of tobacco consumption in low-income and middle-income nations. It was launched by NCI and the Fogarty International Center, together with other partners, in September 2002.

Smokeless Tobacco Use, Prevention, and Cessation – An initiative focused on smokeless tobacco research: the factors that mediate initiation, use, and cessation; the relationship of smokeless tobacco to other tobacco products; and the development of methods for studying smokeless tobacco products and related human behaviors.

Funding opportunities, including program announcements and career development awards, are available at <http://cancercontrol.cancer.gov/funding.html>.

Tobacco Control Research Branch Staff

Michele Bloch, MD, PhD
Chief, TCRB
michele.bloch@nih.gov

Meredith Grady, MPH
Public Health Advisor
meredith.grady@nih.gov

Annette Kaufman, PhD, MPH
Program Director
annette.kaufman@nih.gov

Mark Parascandola, PhD, MPH
Program Director
mark.parascandola@nih.gov

Erik Augustson, PhD, MPH
Program Director
erik.augustson@nih.gov

Rachel Grana, PhD, MPH
Program Director
granar@mail.nih.gov

Stephanie Land, PhD
Program Director
stephanie.land@nih.gov

Iva Stoyneva, MA
Fellow

Selected Initiatives and Projects

Tobacco Control Monograph Series

The NCI Tobacco Control Monograph Series provides ongoing and timely information about emerging public health issues in smoking and tobacco control. Monographs 1–20 are available online to download and order copies free of charge.

Smoke-Free Meetings Policy

Since January 1, 2007, NCI has required that all meetings and conferences organized or primarily sponsored by NCI be held in a state, county, or city that has adopted a comprehensive smoke-free policy. In this way, NCI recognizes jurisdictions that have chosen to protect the public from secondhand smoke. An NCI website, <http://meetings.smokefree.gov>, facilitates the selection of smoke-free meeting locations.

Collaborative Research on Addiction (CRAN)

CRAN is a NIH partnership between the National Institute on Alcohol Abuse and Alcoholism, the National Institute on Drug Abuse, and NCI to integrate resources and expertise and advance cross-cutting research in substance use, abuse, and addiction, and their related health consequences. CRAN solicits extramural research applications through FOAs.

World Health Organization

Collaboration with the World Health Organization Tobacco Free Initiative

TCRB scientists regularly participate in activities sponsored by the World Health Organization (WHO) Tobacco Free Initiative, including the the WHO Study Group on Tobacco Product Regulation, whose purpose is to develop recommendations and advisories to aid the implementation of the Framework Convention on Tobacco Control. TCRB scientists have also collaborated with the WHO's International Agency for Research on Cancer to help produce monographs on such subjects as involuntary smoking and smokeless tobacco.

Smoking Cessation Programs

Smokefree.gov Initiative

The Smokefree.gov Initiative (<http://smokefree.gov/>) provides smokers who want to quit with free, evidence-based smoking cessation information and on-demand support. Since 2003 this initiative has been developing and disseminating Web- and mobile-based interventions in English and Spanish, including four websites, six smartphone applications, 13 social media channels, and multiple text messaging programs.

QUIT-NOW 1-800-QUIT-NOW (1-800-784-8669), National Network of Tobacco Cessation Quitlines

The National Network of Tobacco Cessation Quitlines is a state/federal partnership that gives tobacco users in every state access to the tools and resources they need to quit smoking, ensuring the highest level of assistance to tobacco users who want to quit. Users can call the toll-free number to be connected to the quitline in their state.
