

**Funding Opportunity Announcements (FOA)**
**March 2017**
**Tobacco Use and HIV in Low and Middle Income Countries**

PAR-17-087 (R01), PAR-17-086 (R21)

The purpose of this FOA is to encourage research focused on tobacco use and human immunodeficiency virus (HIV) infection in low- and middle-income countries (LMICs). In particular, applications are encouraged that focus on the development and evaluation of tobacco cessation interventions tailored to HIV-positive populations, including those with co-morbidities such as tuberculosis, in low-resource settings in LMICs.

**Expiration:** January 8, 2020

**Improving Smoking Cessation in Socioeconomically Disadvantaged Populations via Scalable Interventions**

PAR-16-202 (R01), PAR-16-201 (R21)

The purpose of this FOA is to provide support for highly innovative and promising intervention research designed to improve smoking cessation outcomes among socioeconomically disadvantaged populations. Specifically, this FOA is intended to stimulate research efforts aimed at the development of smoking cessation interventions that: 1) are targeted to socioeconomically disadvantaged populations, and 2) could be made scalable for broad population impact. Applicants may propose projects that develop and test novel cessation interventions with the potential to be scaled up, and projects that focus on enhancing the effectiveness, quality, accessibility, utilization and cost-effectiveness of currently scaled smoking cessation interventions.

**Expiration:** June 14, 2019

**Research Aimed at Novel Behavioral Targets to Improve Adolescent Substance Abuse Treatment and Prevention Interventions**

PA-15-035 (R34)

Areas supported by this FOA include research to inform the generation and refinement of novel targets for substance abuse treatment and prevention interventions, modules or adjuncts to existing treatments and prevention interventions that seek to target and modulate behavioral or neurobehavioral processes (e.g., impulsivity, risk-taking propensity, sensation and novelty seeking, distress tolerance, delay discounting, self-regulation, stress reactivity) in adolescents. This FOA is part of the trans-NIH initiative known as Collaborative Research on Addiction at NIH.

**Expiration:** January 8, 2018

**Exploratory Studies of Smoking Cessation Interventions for People with Schizophrenia**

PAR-14-230 (R21), PAR-14-231 (R33)

The purpose of this FOA is to provide support for grant applications to generate and conduct preliminary tests of targeted smoking cessation treatments for smokers with schizophrenia, who have co-occurring alcohol and/or substance abuse disorders are also a population of interest. This FOA encourages Phased Innovation applications that focus on early-stage, treatment generation and pilot clinical trials that are consistent with an experimental therapeutic approach. It provides support for up to two years (R21 phase) for protocol development and target identification and engagement studies, followed by up to 3 years of support for exploratory/pilot studies to further evaluate target engagement and its prospective association with clinical benefits, and to evaluate the feasibility of conducting a larger trial.

**Expiration:** April 18, 2017

### **Tobacco Regulatory Science Small Grant Program for New Investigators**

RFA-OD-15-004 (R03)

The purpose of this FOA is to support New Investigators in the biomedical, behavioral, and social sciences who are in the early stages of establishing independent careers in tobacco regulatory research. Applicants are encouraged to conduct projects that ultimately have potential to inform regulations on tobacco product manufacturing, distribution, and marketing. Research projects must address the research priorities related to the regulatory authority of the Food and Drug Administration's Center for Tobacco Products as mandated by the Family Smoking Prevention and Tobacco Control Act, Public Law 111-31.

## **Tobacco-Related FOAs Led by Other NIH ICs**

### **Target Assessment, Engagement and Data Replicability to Improve Substance Use Disorders Treatment Outcomes**

PAR-16-352 (R03)

Areas supported by this FOA include research to generate and conduct preliminary tests of targeted addiction treatment to address multiple substances, which may include alcohol, tobacco and other drug use. This FOA is part of the trans-NIH initiative known as Collaborative Research on Addiction at NIH.

**Expiration:** September 8, 2019

**NCI Contact:** Glen Morgan, 240-276-6787, Glen.Morgan@nih.gov

### **Integrative Research on Polysubstance Abuse and Addiction**

PAR-16-291 (R21/R33)

The intent of this FOA is two-fold: (1) characterize how the neurobiological alterations, associated behaviors, and public health consequences arising from polysubstance use differ from, or are similar to, those observed in single drug use; (2) promote integrative polysubstance research along a translational pipeline, consisting of basic science research in animals, human-based laboratory investigations, and epidemiological studies. This FOA is part of the trans-NIH initiative known as Collaborative Research on Addiction at NIH.

**Expiration:** September 8, 2019

**NCI Contact:** Glen Morgan, 240-276-6787, Glen.Morgan@nih.gov

### **Multi-Site Studies for System-Level Implementation of Substance Use Prevention and Treatment Services**

PAR-16-455 (R01)

The purpose of this FOA is to support the development and testing of interventions, models, and/or frameworks that examine system-level implementation of evidence-based interventions, guidelines, or principles to improve the delivery, uptake, quality, and sustainability of substance use prevention and treatment interventions and services. This FOA is part of the trans-NIH initiative known as Collaborative Research on Addiction at NIH.

**Expiration:** November 14, 2020

**NCI Contact:** Glen Morgan, 240-276-6787, Glen.Morgan@nih.gov

### **Tobacco Centers of Regulatory Science for Research Relevant to the Family Smoking Prevention and Tobacco Control Act**

NOT-OD-16-151 (U54)

The overall TCORS program objective is to conduct programs of multidisciplinary research that will inform the manufacture, distribution, and marketing of tobacco products related to the regulatory authorities of FDA CTP. The research findings that will be generated from this FOA are expected to provide additional scientific data to inform the regulation of tobacco products to protect public health.
