

Seeking Letters of Interest from Animal Model Researchers of Human Behavior and Social Processes

February 2017

The National Cancer Institute (NCI) invites letters of interest from researchers with expertise in cancer-related animal models of human behavior and social processes to join the Basic Biobehavioral and Psychological Sciences Branch (BBPSB) as a **Scientific Program Director**. Candidates with the vision and ability to cultivate an animal model portfolio of population-based research on behavioral and social processes relevant to cancer prevention and control are especially encouraged to apply.

BBPSB cultivates an extramural portfolio that generates basic behavioral, biobehavioral and psychological science knowledge with translational relevance to cancer prevention and control. Within this context, basic behavioral, biobehavioral and psychological science research involves the study of human and/or animal functioning in order to understand the underlying mechanisms and processes of health behavior. Knowledge of these processes and mechanisms will help improve how cancer is understood, prevented, and managed across the cancer control continuum.

The branch is within the Behavioral Research Program in the Division of Cancer Control and Population Sciences (DCCPS) at the NCI.

Scientific Program Directors within DCCPS enjoy an intellectually stimulating and collegial environment that supports the use of their expertise to determine research priorities, develop funding opportunities, and identify resources needed to accelerate scientific discovery.

View the BBPSB Scientific Program Director for Animal Models of Human Behavioral and Social Processes position description and other NCI career and training opportunities at: cancercontrol.cancer.gov/brp/career_training.html.

Animal model researchers with cancer-relevant experience are encouraged to submit a letter of interest, CV, and two representative publications immediately to Paige Green, PhD, MPH, BBPSB Chief at ncidccpsbrpadvances@mail.nih.gov.

Consider using your scientific expertise to conduct and support an integrated program of research that aims to reduce the risk, incidence, and deaths from cancer and to enhance cancer survivorship.
